## Genetic identification of sideritis sample

Dear Mr Paleokastritis

Herein we would like to inform you on the genetic identification of the sample you have send us. We have investigated the origin of the species using DNA barcoding methodology by amplifying and sequencing known and published by our group barcoding region which is suitable to discriminate sideritis species.

The genetic analysis suggests that the OLYMPOUS sample belongs to *S. scardica*.

Sincerely yours

Panagiotis Madesis
